# Digital transformation in nose surgery

University of Zagreb Faculty of Mechanical Engineering and Naval Architecture

\* University Hospital Centre Zagreb; Department of Otolaryngology, Head and Neck Surgery

# Content

- Aim and goals of work
- Inferior nasal turbinates surgery in CAD
- Rhinoplasty in Virtual Reality
- Future work

# Aim and goals of work<sup>[1][2]</sup>

- **Digital integration** of the whole nose surgery process:  
from the diagnosis and state of a specific patient, through surgery itself till wider health-care and social context.
- **better understanding – new knowledge**
- **normization – increased efficiency**
- **new tools, mechanization and automation**

International journal of industrial engineering and management 14 (1), 13-24, 2023

- Two surgery procedures observed in the work:
  - **inferior nasal turbinate surgery<sup>[3]</sup>**
  - **rhinoplasty<sup>[4]</sup>.**

# Inferior nasal turbinates surgery in CAD

- designed and simulated in CATIA Delmia V5 software
- design stages:
  - head and tissue
  - tool and work environment
  - process

# HEAD AND TISSUE design – complexity and simplifications

Preparation of the model of the head:

1. collecting CT scans
2. conversion into CAD models (STL format)
3. repairing with Blender

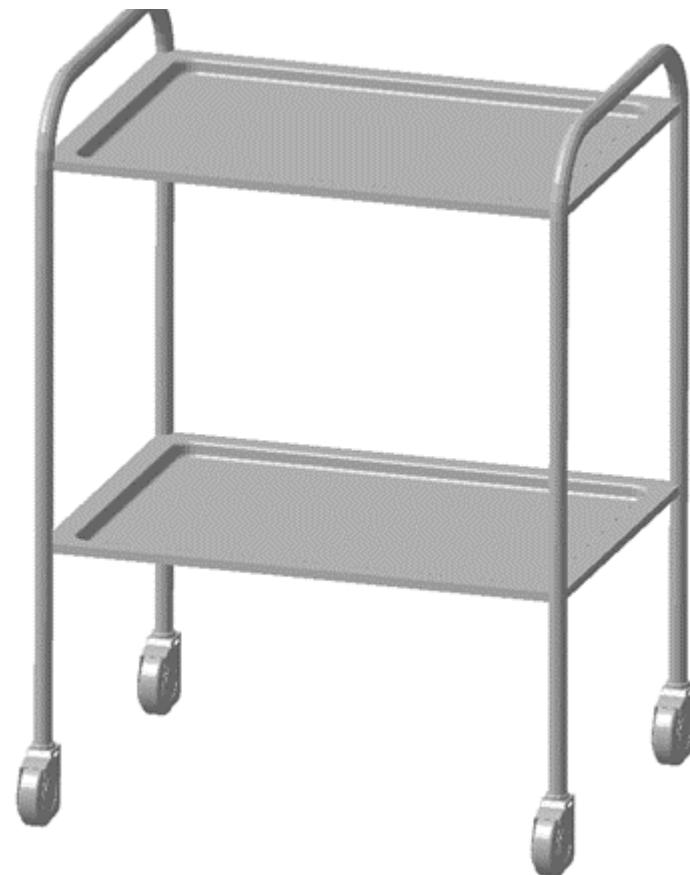

# TOOL AND WORK ENVIRONMENT design

Operating table

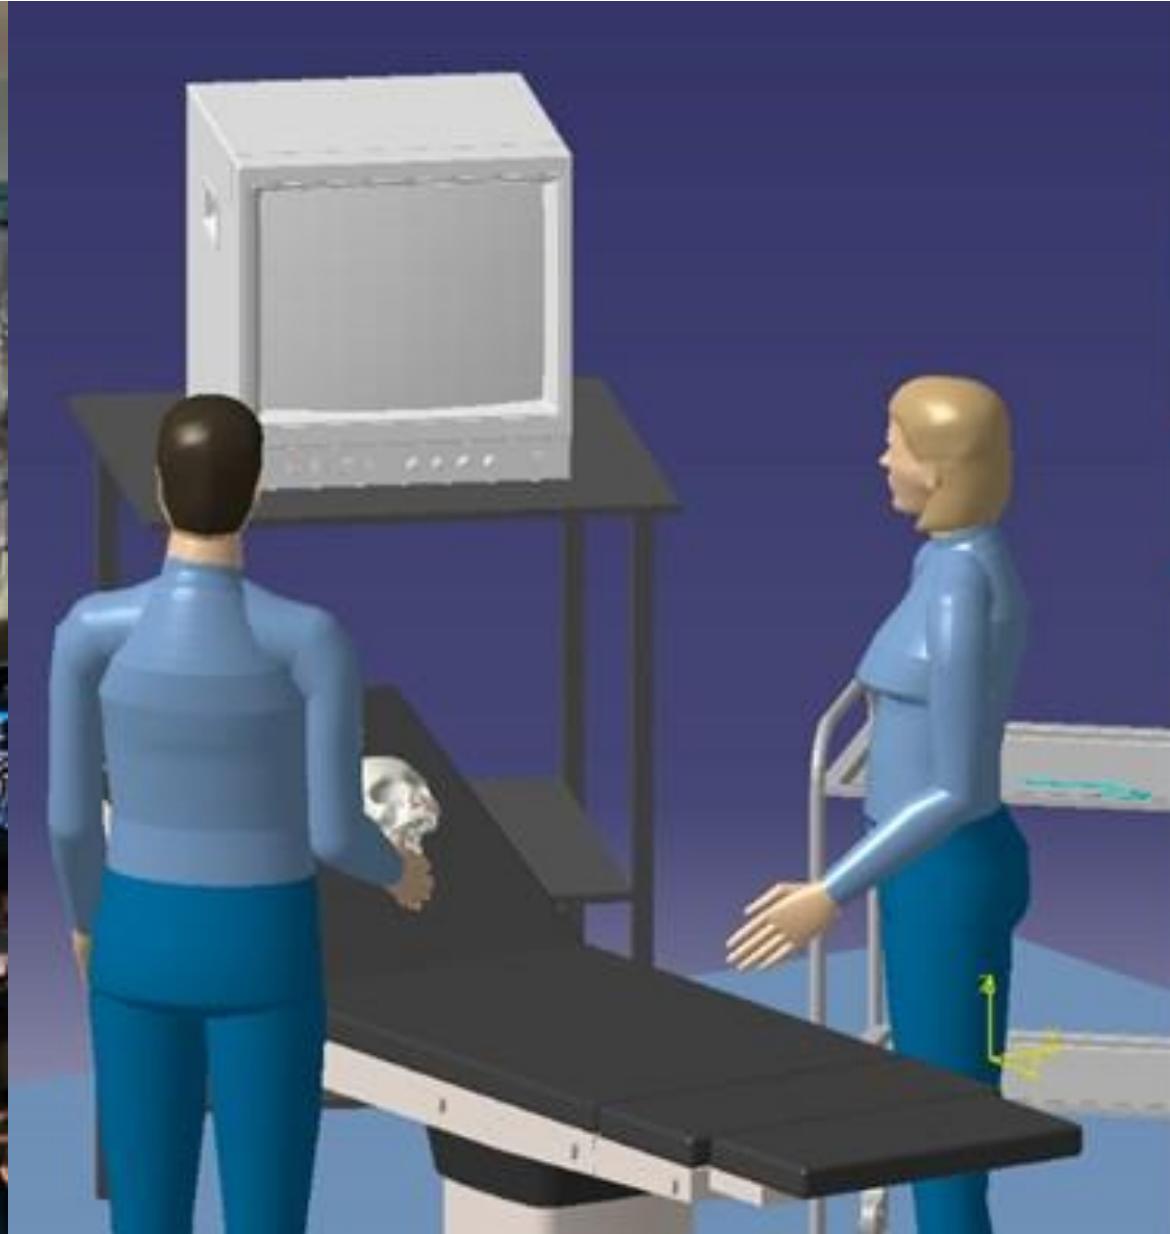

Surgery scissors

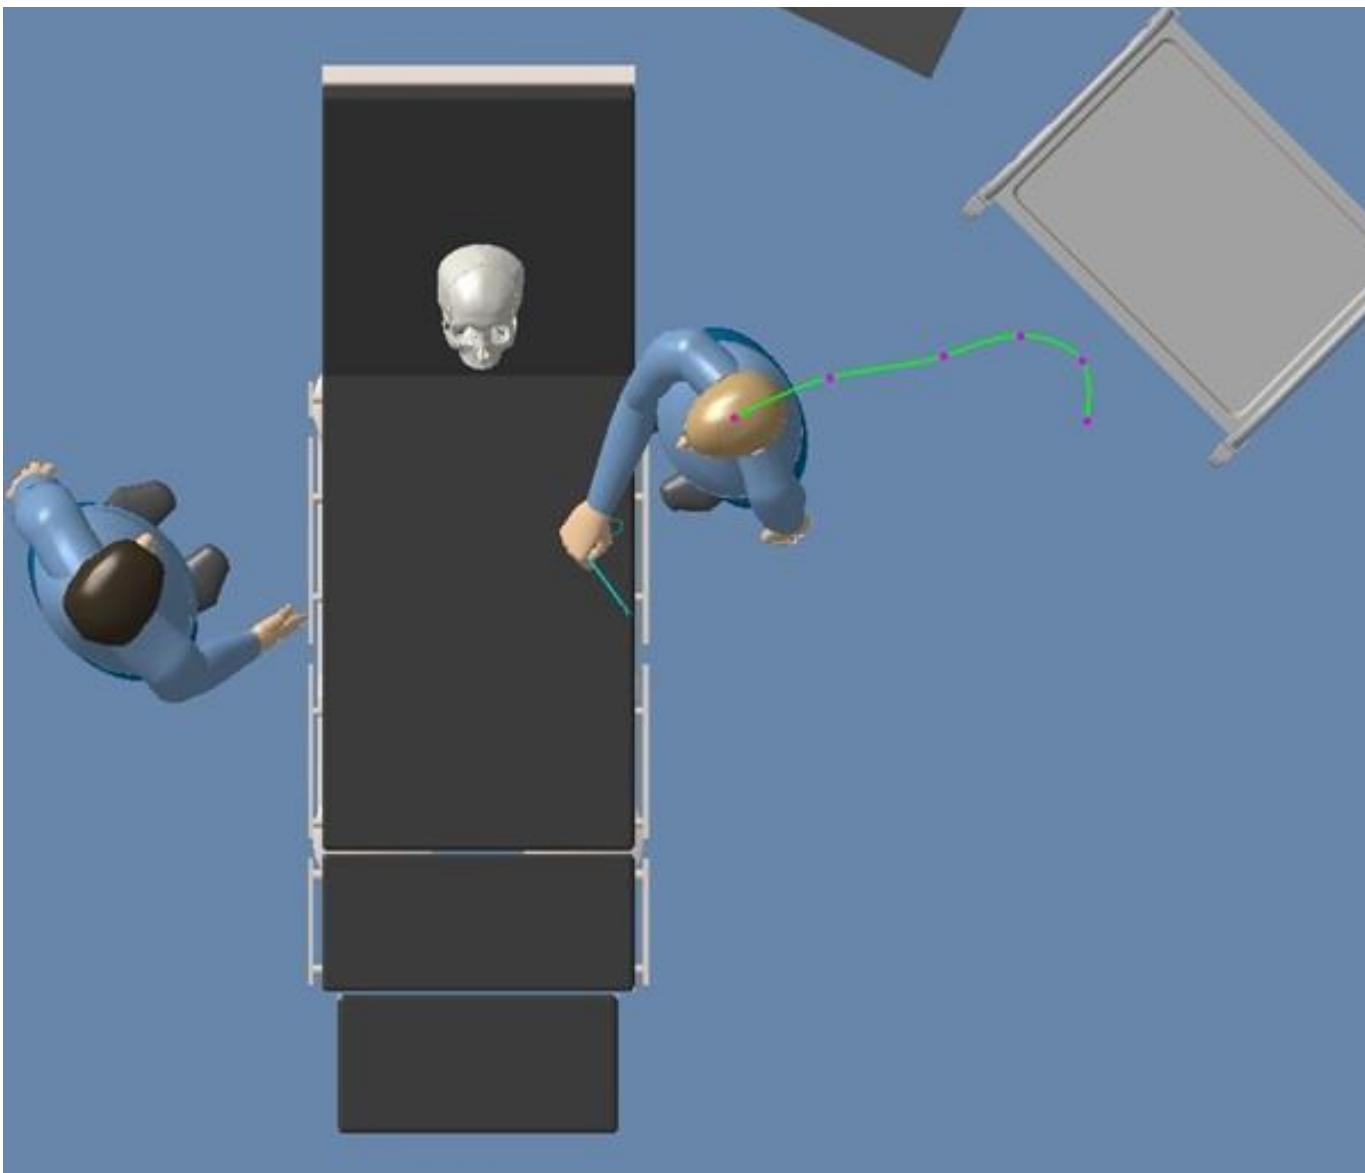

Operating tray (cart)

# The real-world and virtual inferior nasal turbinate surgery

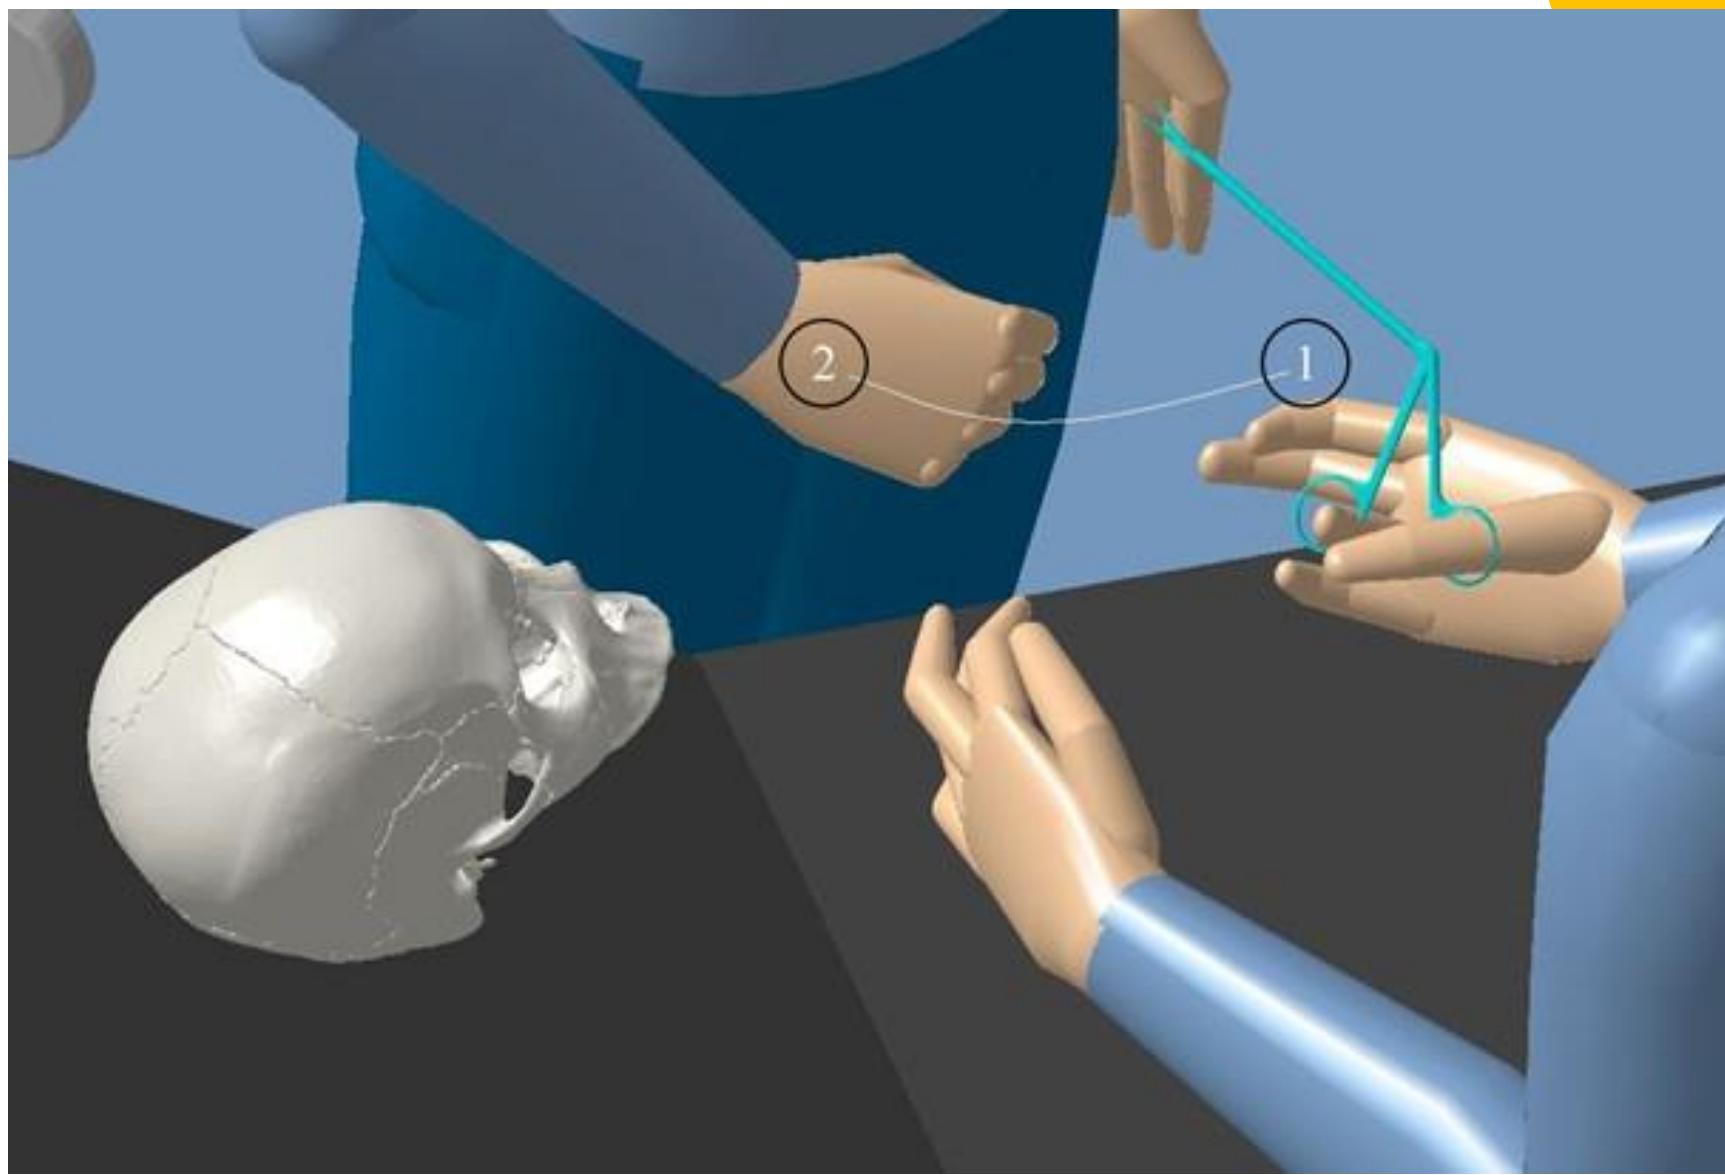

# PROCESS design: work of the surgeon and the instrument technician

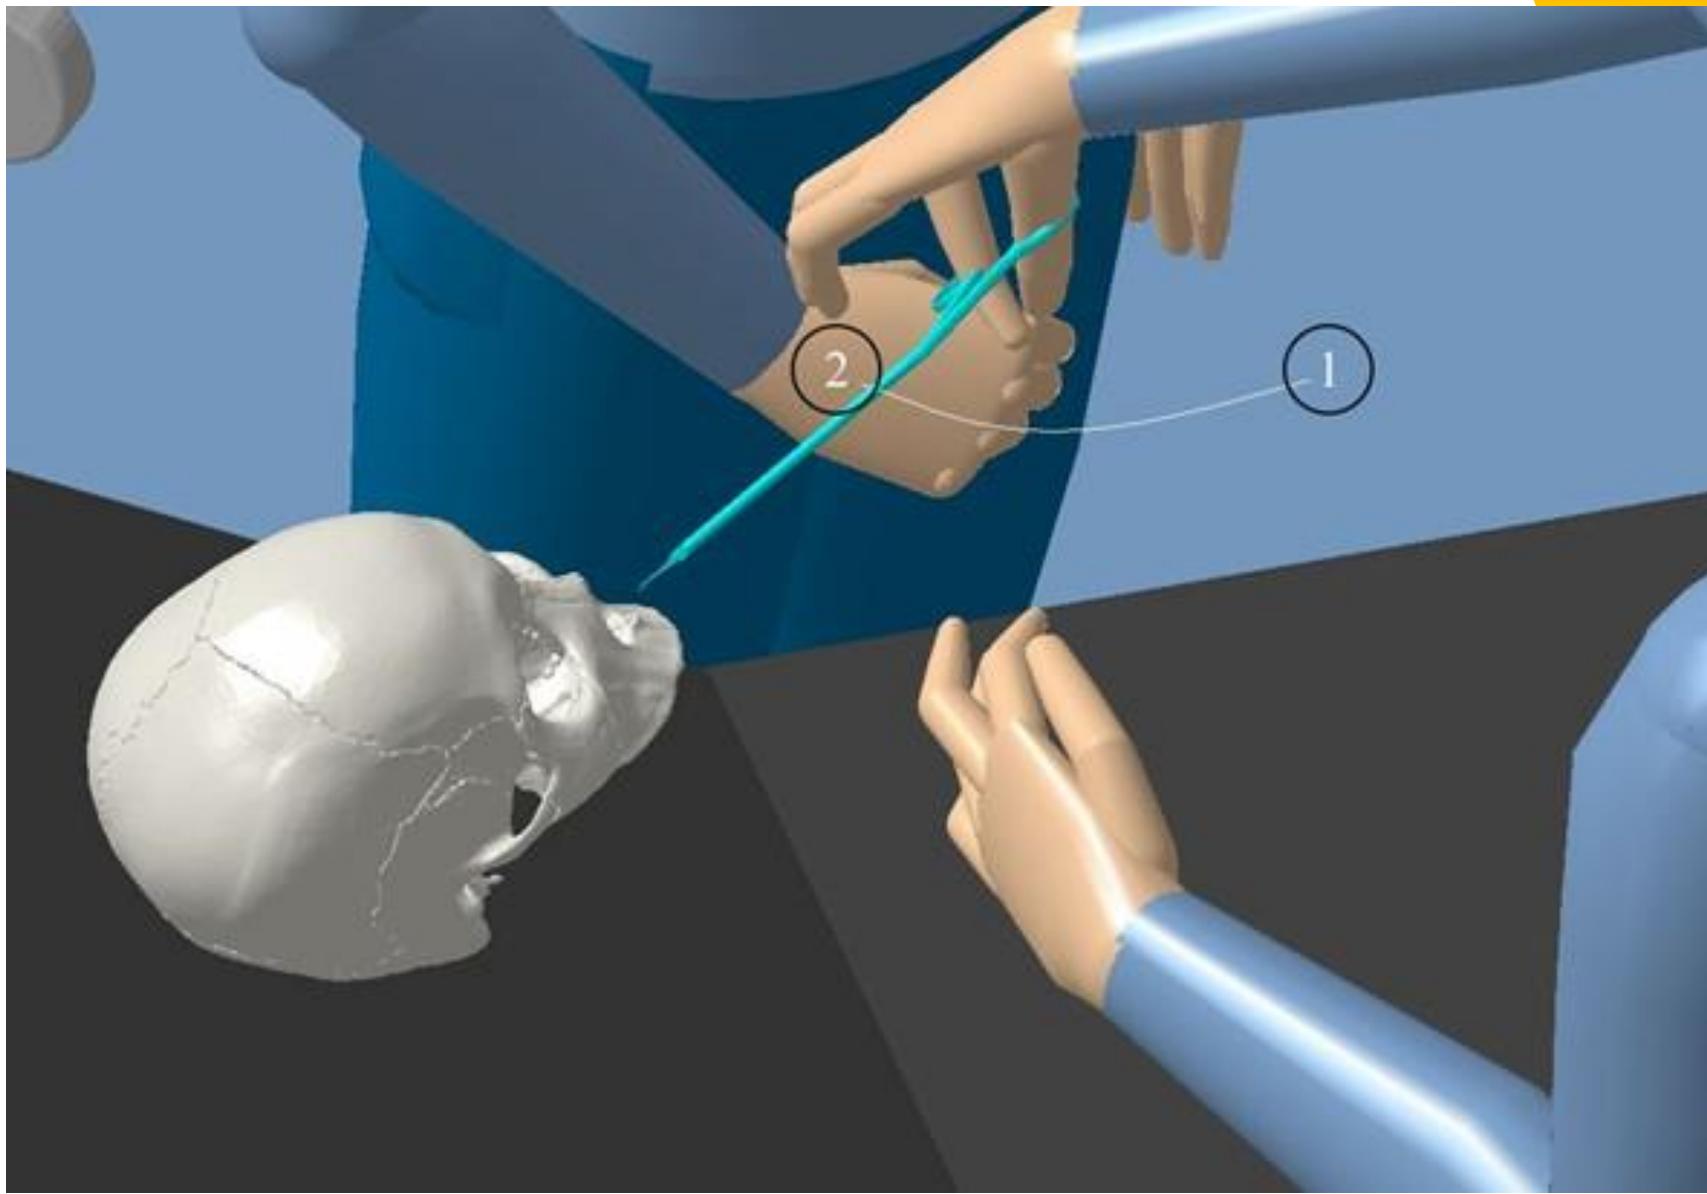

The path of the instrument technician shown

# *Stages of cutting process*

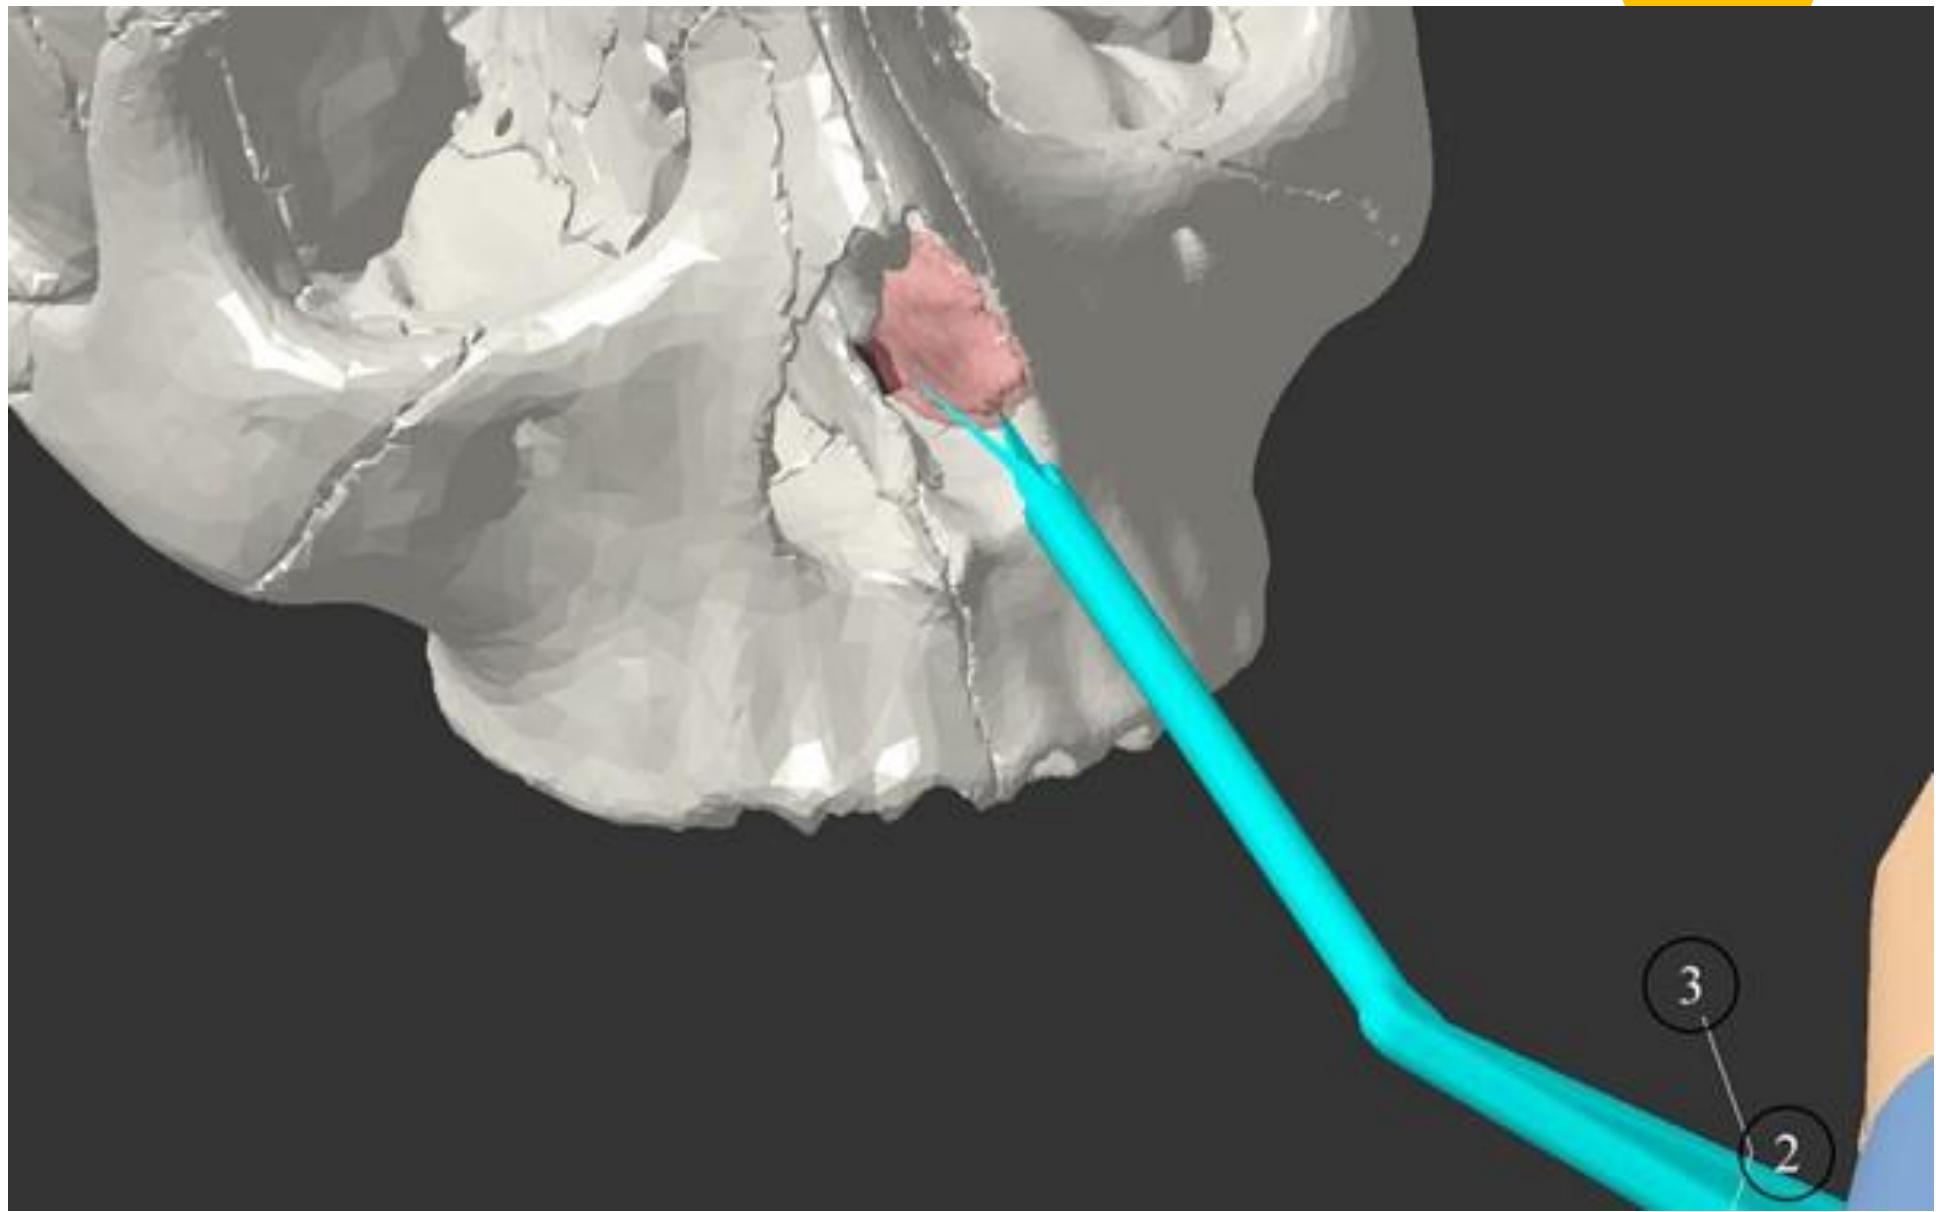

- 1 – starting position**
- 2 – approaching the inferior nasal turbinate**
- 3 – cutting**

# *Stages of cutting process*

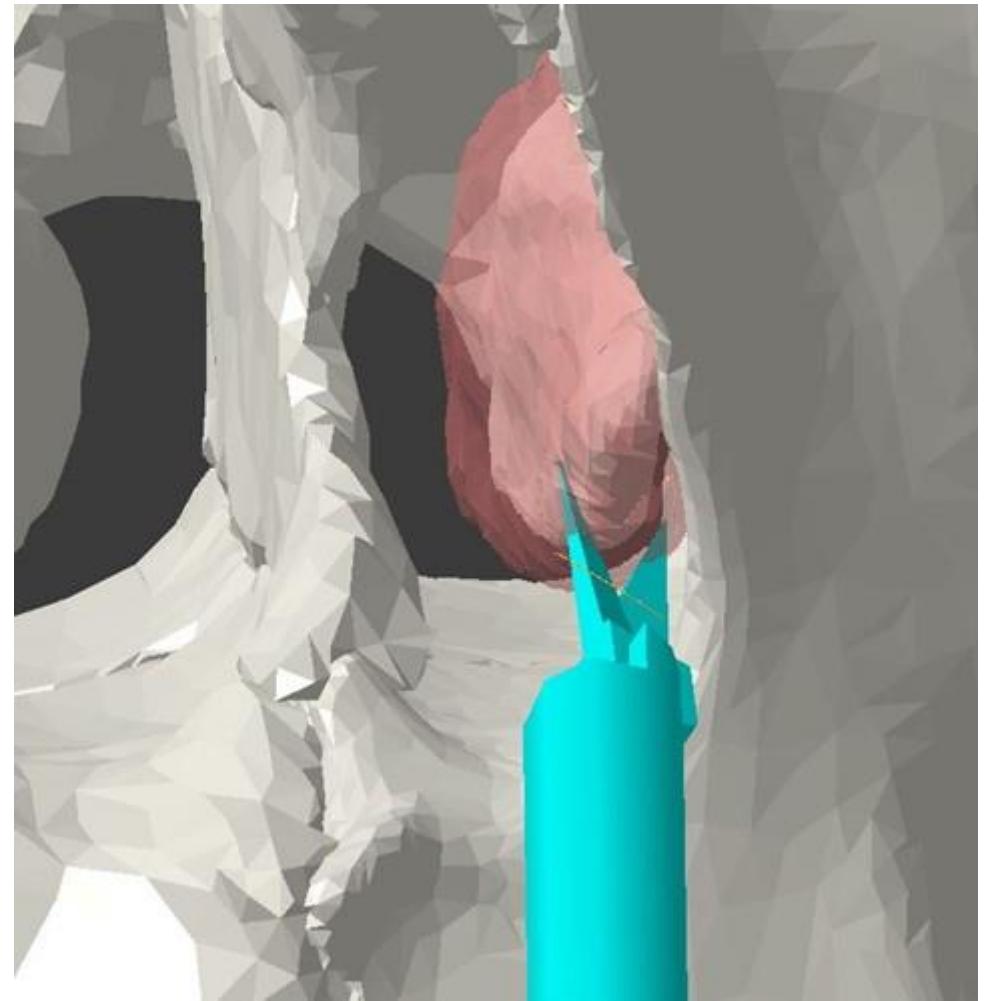

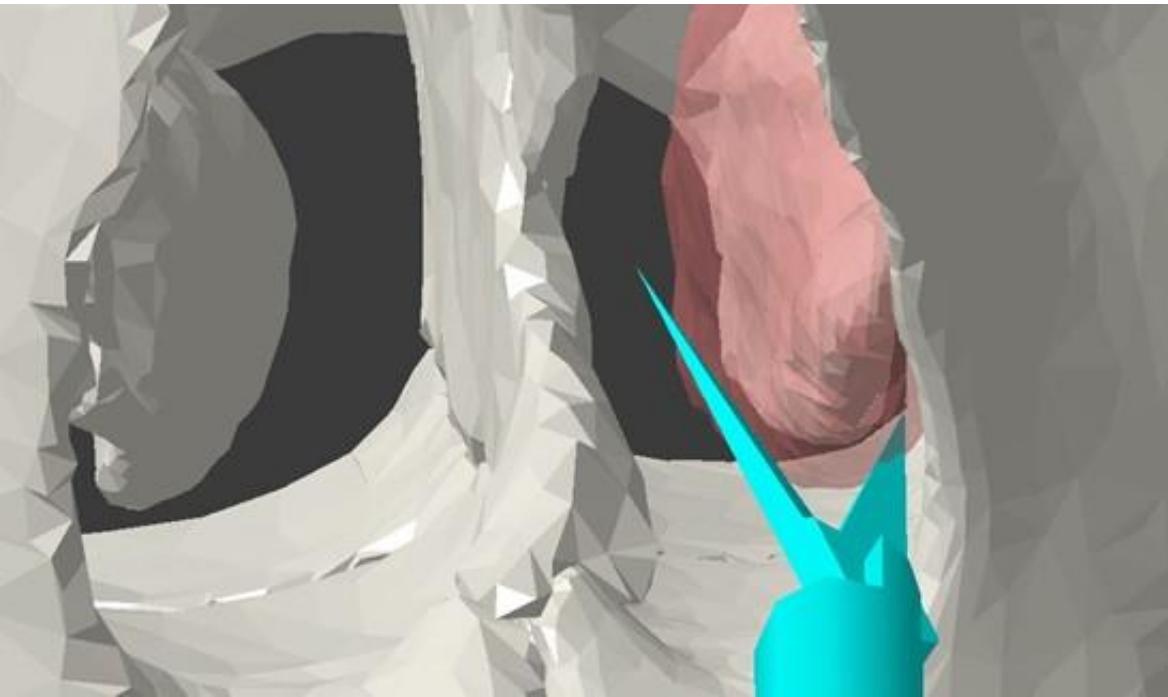

- 1 – starting position
- 2 – approaching the inferior nasal turbinate**
- 3 – cutting

# *Stages of cutting process*

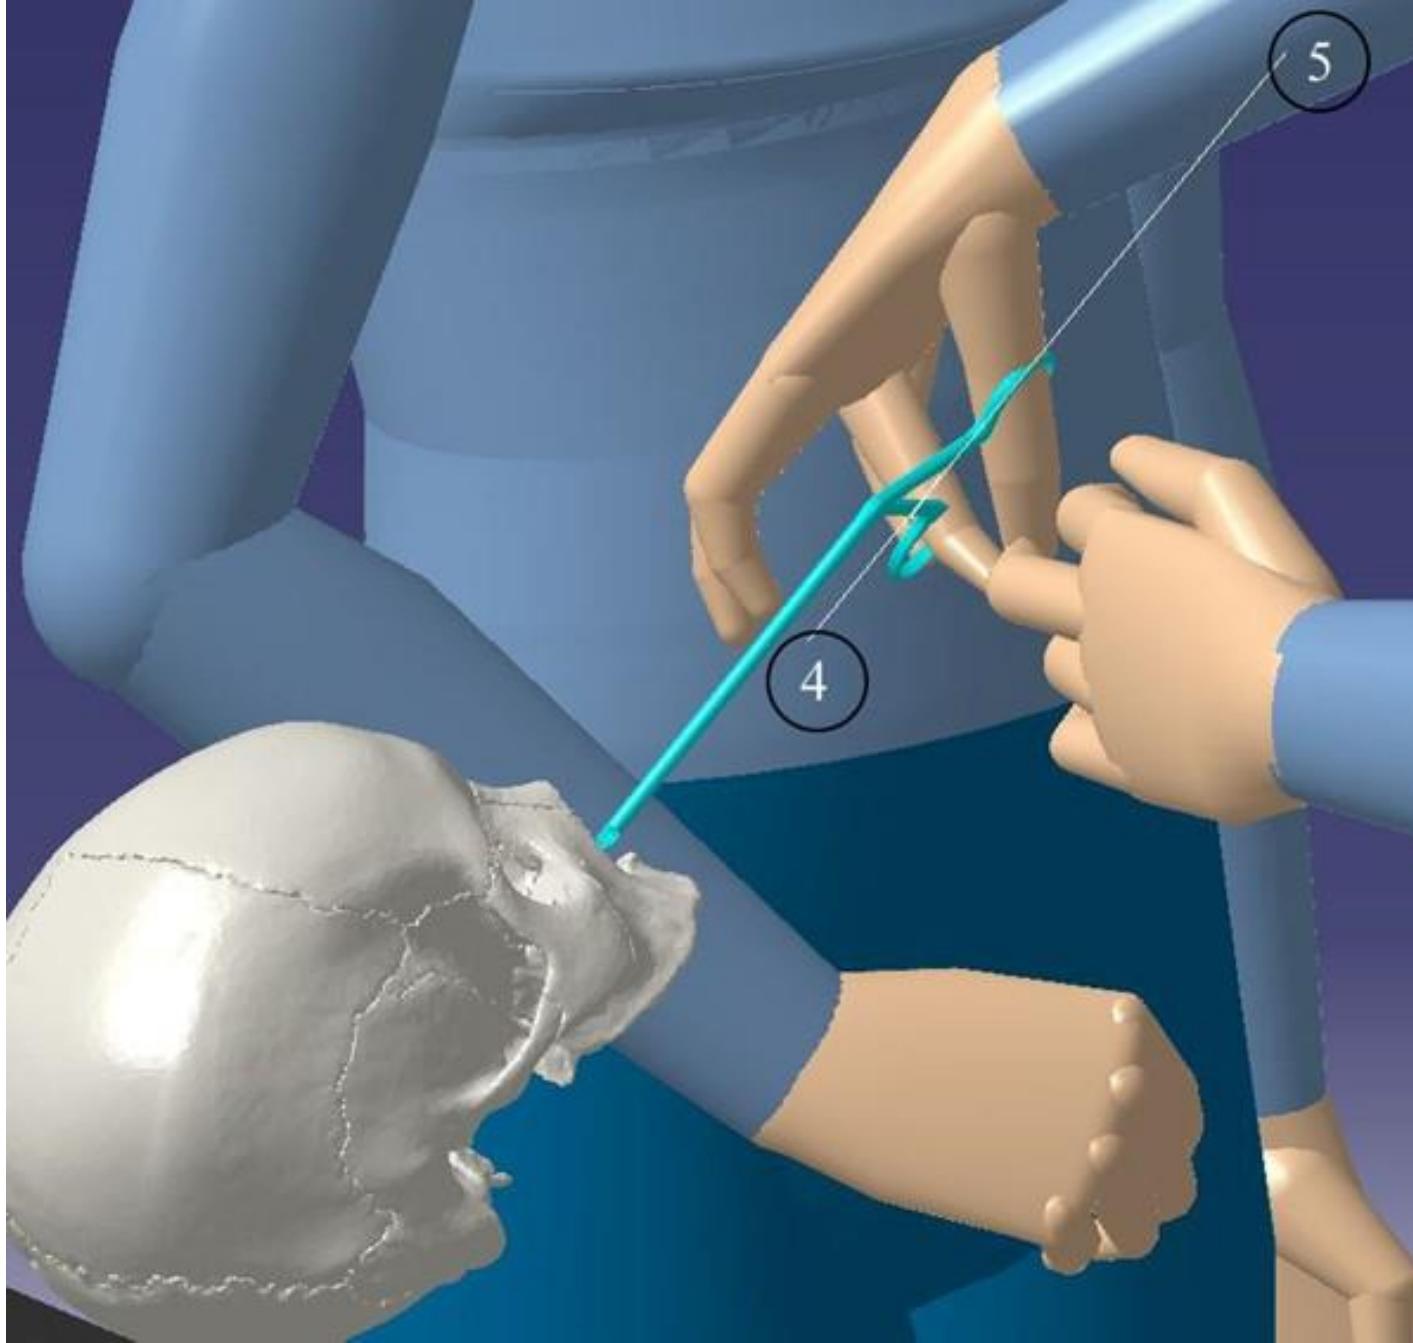

- 1 – starting position
- 2 – approaching the inferior nasal turbinate
- 3 – cutting**

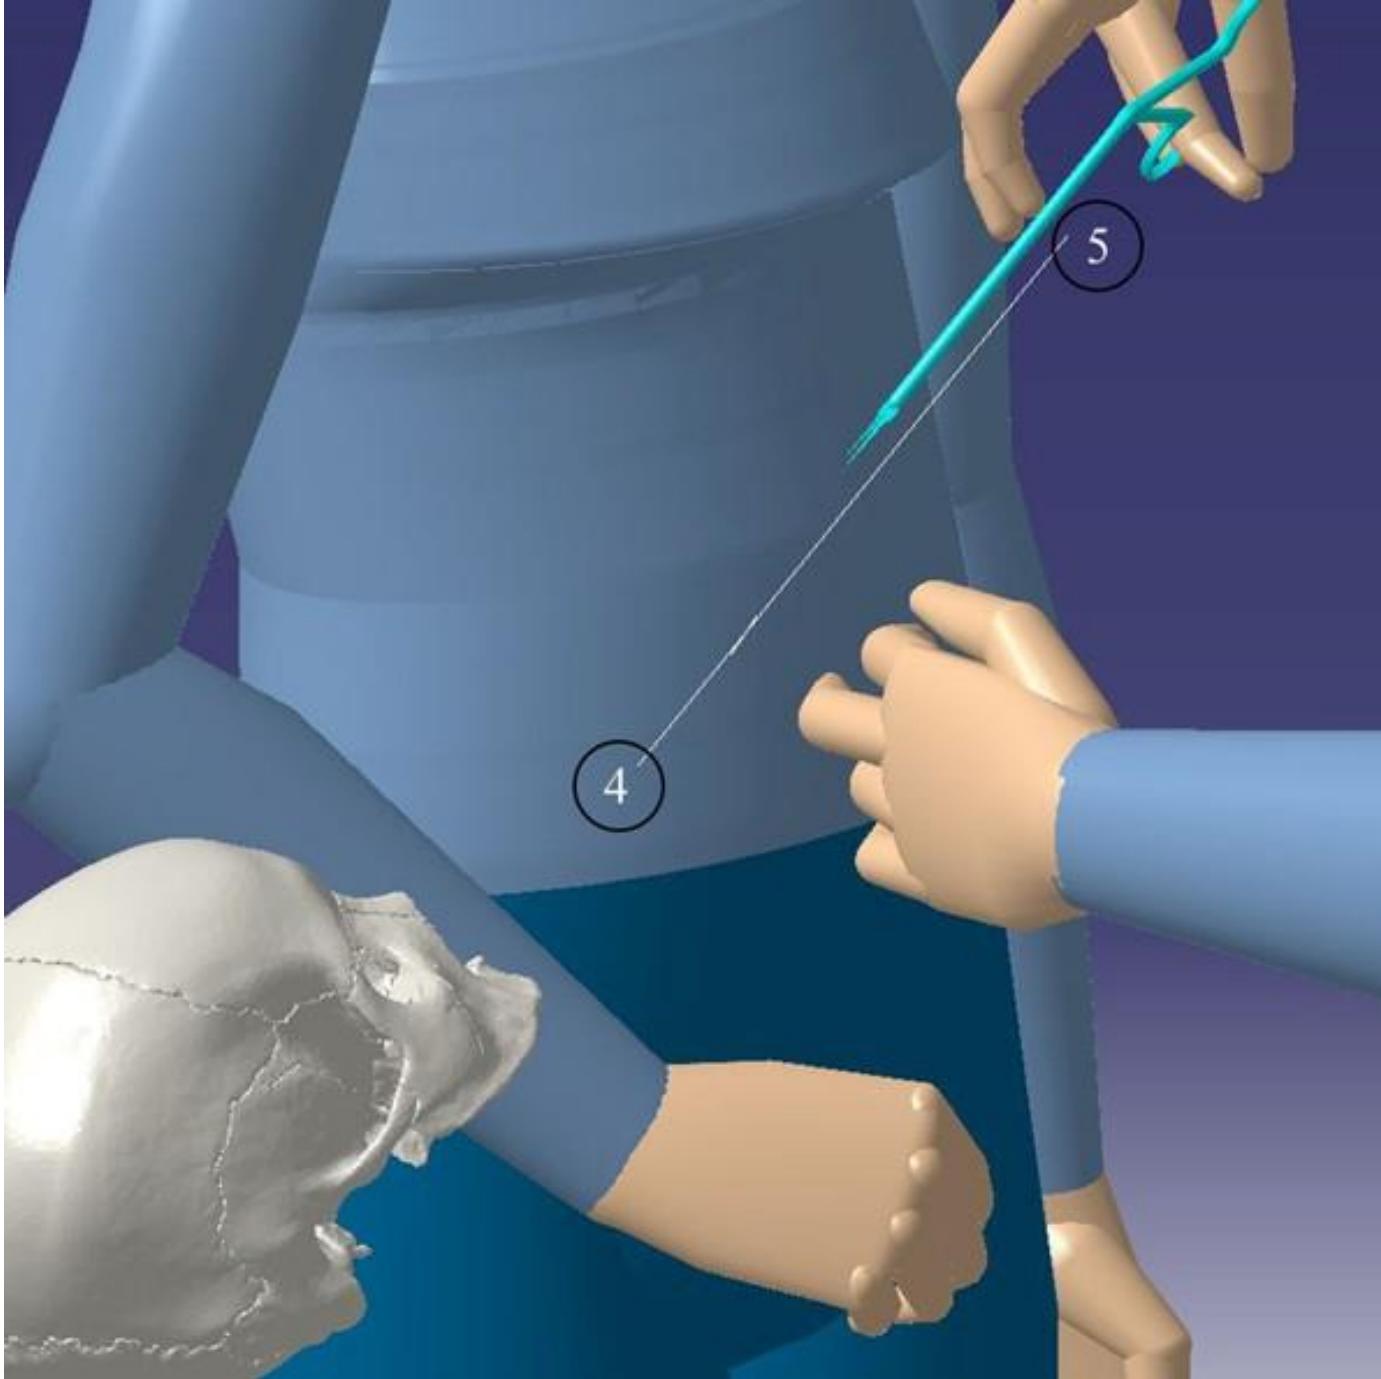

| Virtual cutting (opening and closing of scissors) of the inferior nasal turbinate

# *Stages of cutting process*

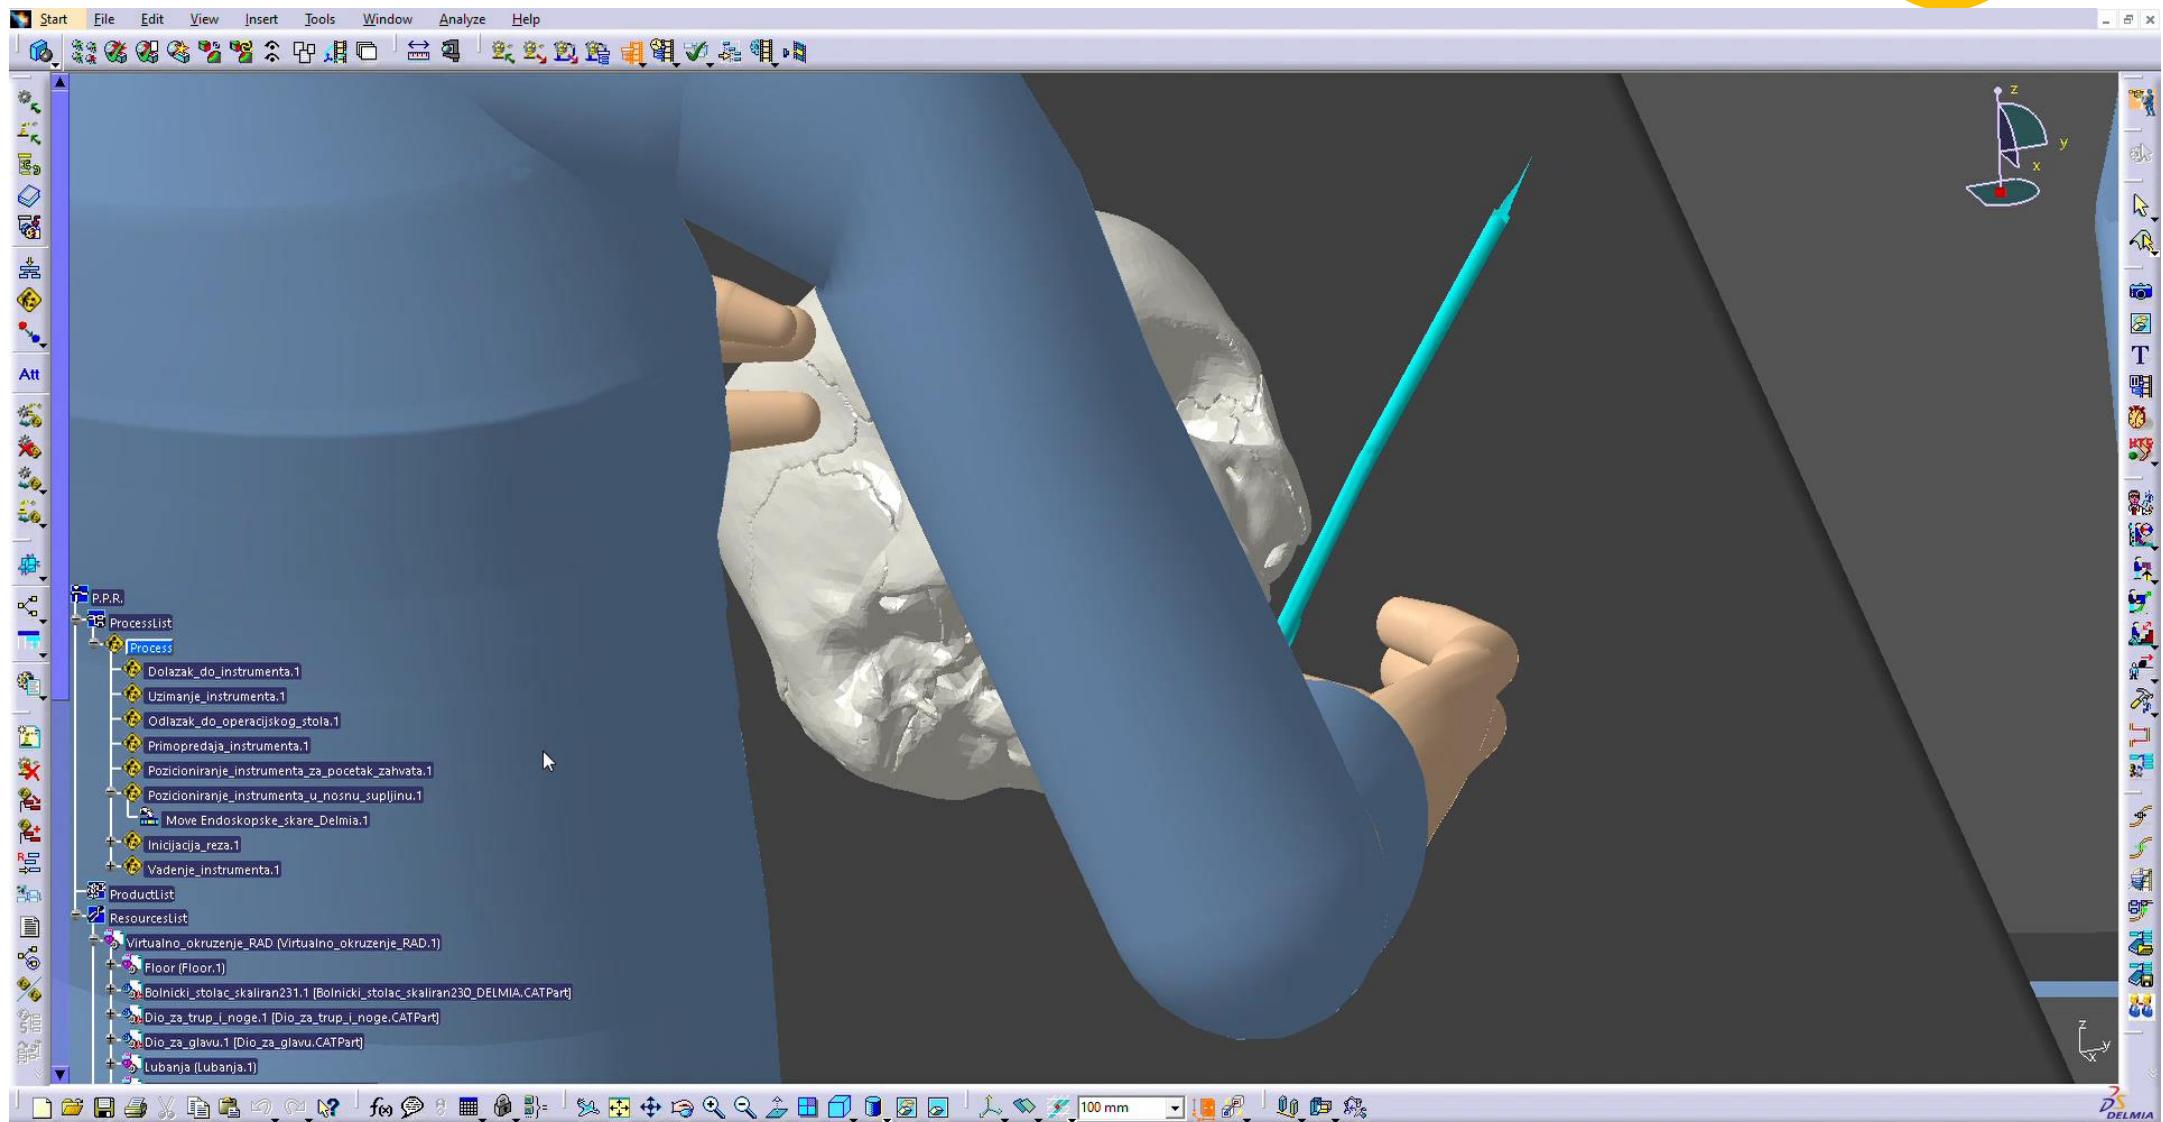

4 and 5 represent starting and final points of the extraction of tool

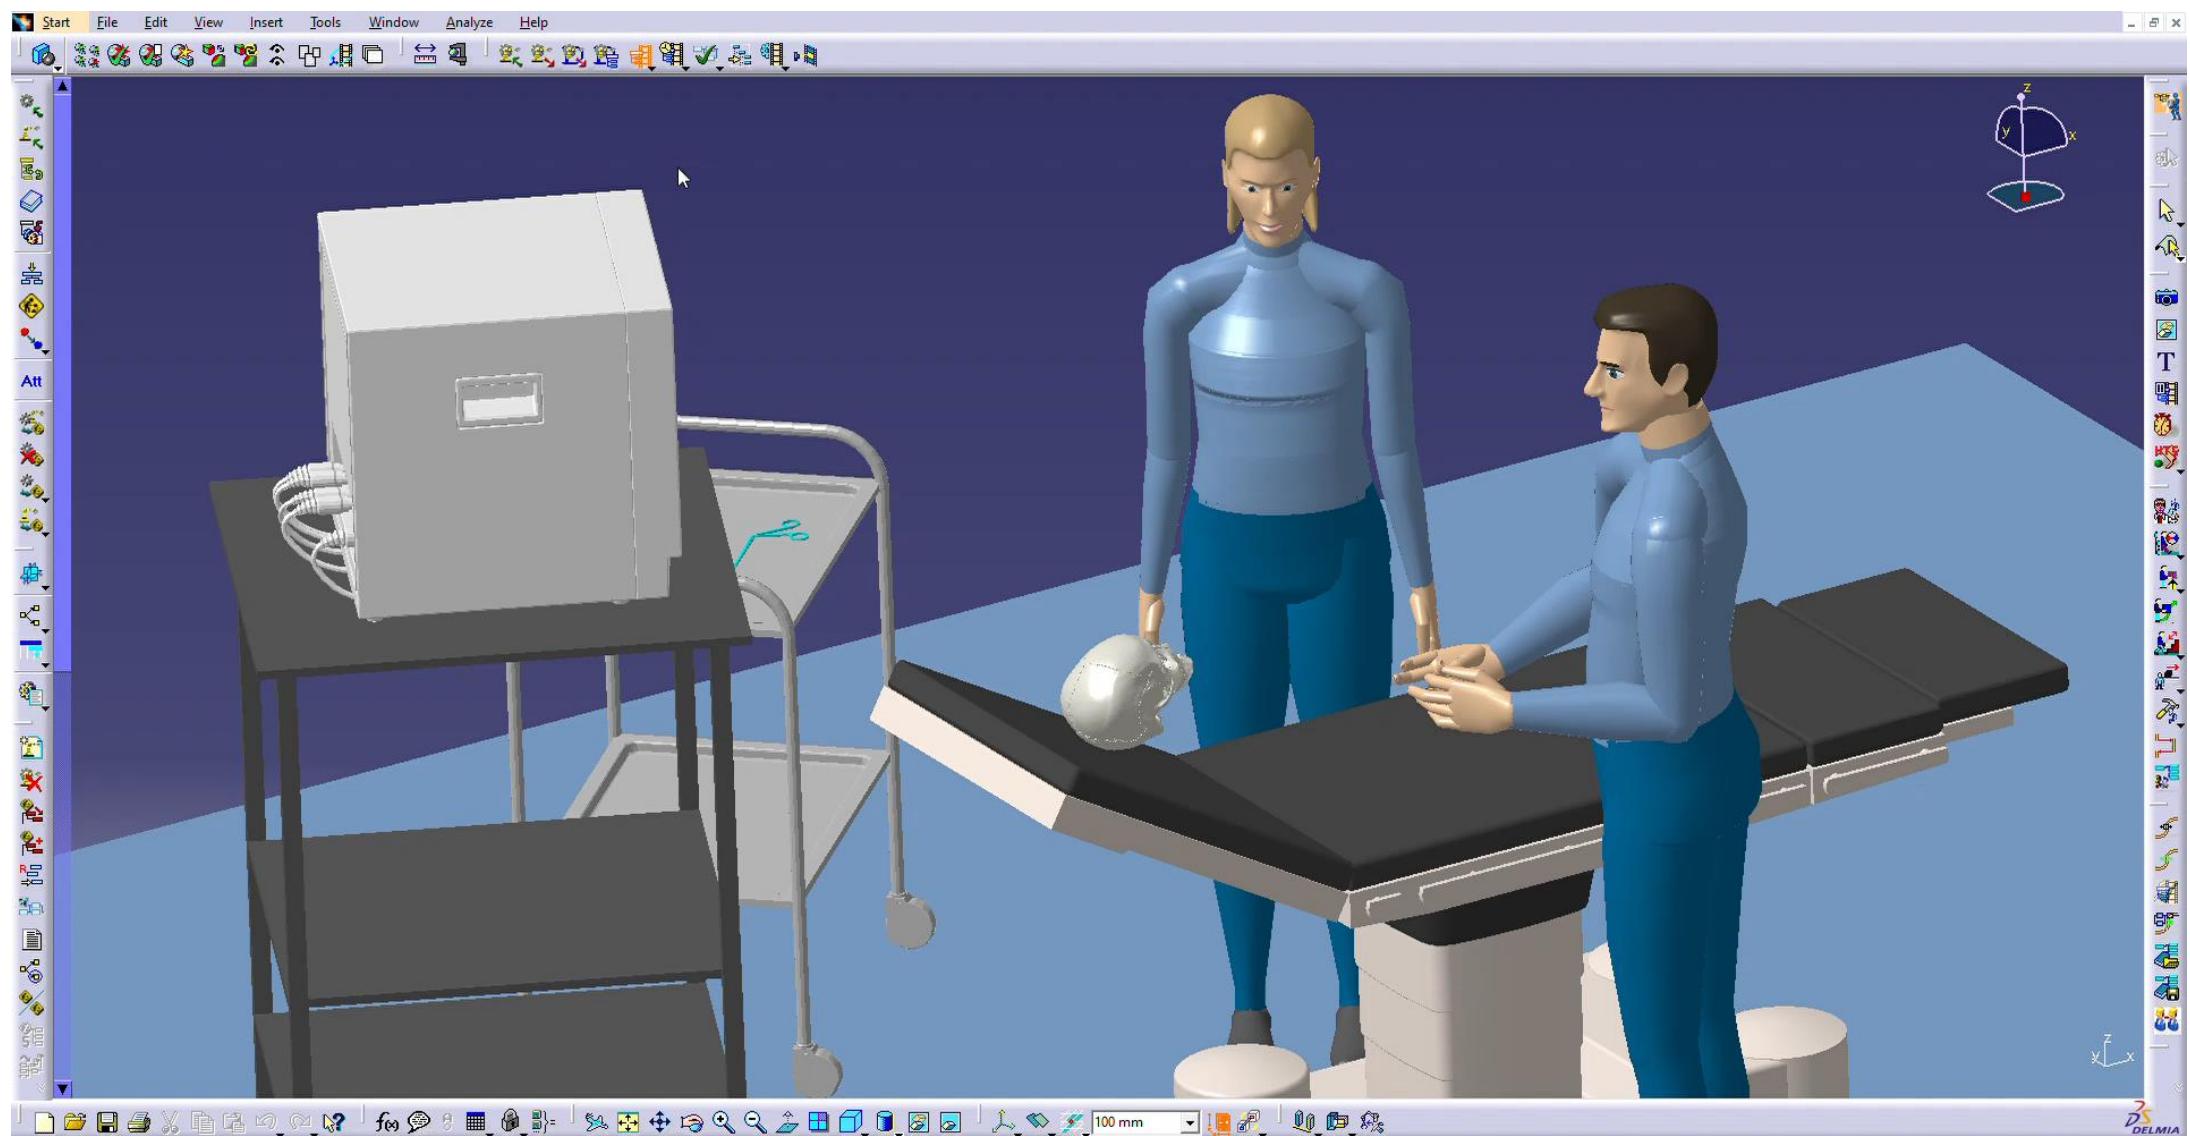

# *Stages of cutting process*

4 and 5 represent starting and final points of the extraction of tool

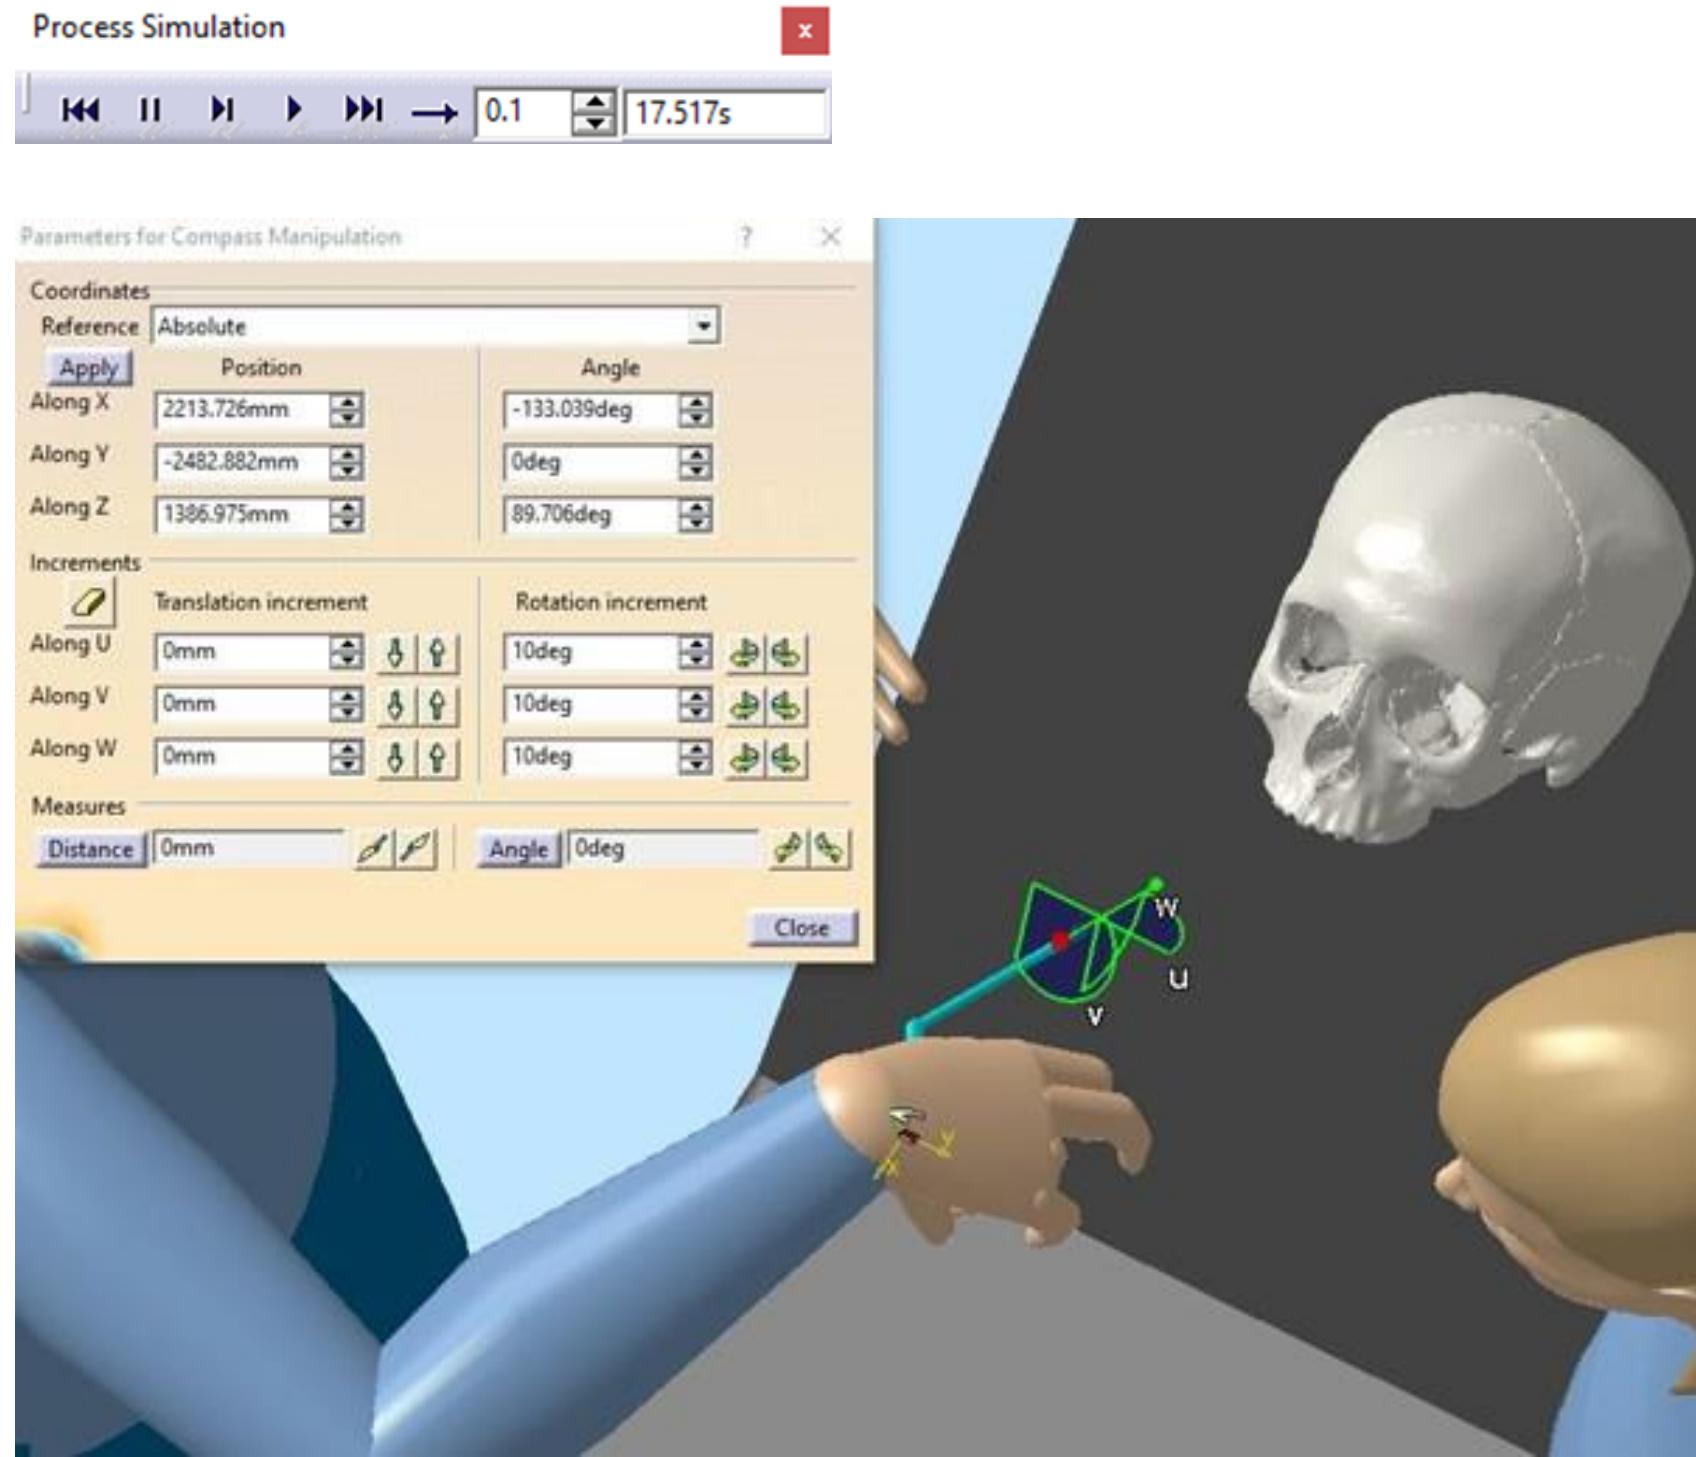

## Cutting process

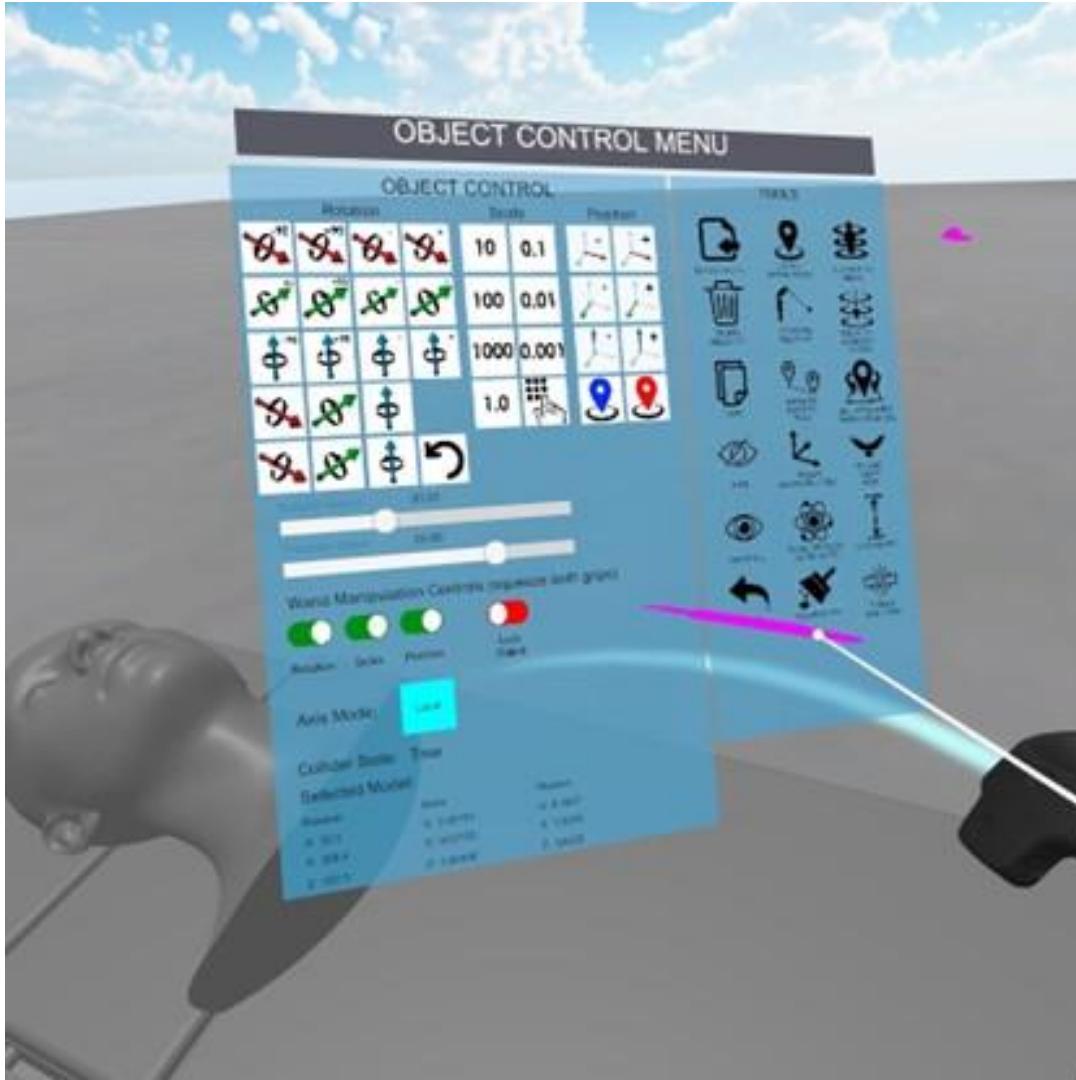

Simulation of the whole process

## Results:

- time of process
- precise angles and lengths of movements
- RULA ergonomics analysis

# Rhinoplasty in Virtual Reality

- HTC Vive headset system
- Tool Center Point (TCP)  
represents the tip of scalpel

## Results:

- precise angles and lengths of movements
- similar feel of control during movements
- delay up to 20 milliseconds

20

# Future work

- Both cases of nose surgery digital twinning give basis for future work, that may include:
- digital encompassing of **further details** of mentioned surgical procedures
  - recording of the **surgeon's actual movements** during the procedures and their transfer to a digital model
  - motion capture and comparing the work of **several surgeons**
  - implementation on a **larger sample of patients**
  - the introduction of virtual reality into **training** of surgeons
  - the introduction of **augmented reality** into surgical procedures.
